

Workforce Connect Platform Product Case Study

Digitizing Workforce, Field Operations, Assisted KYC & B2B Sales

Document Date: September 2025

1. Case Study Overview

Workforce Connect Platform is a multi-sided workforce and field-services platform designed to connect organizations with flexible workers while digitizing operational workflows that were previously manual, fragmented or dependent on multiple systems.

2. The Challenge

- Manual hiring and roster management.
- Manual attendance and payment calculation.
- Field surveys/visits via forms, spreadsheets, email and messaging.
- Merchant/dealer onboarding constrained by device and digital-literacy limitations.
- Limited real-time performance visibility.
- Manual validation and reconciliation.
- Traditional B2B distribution requiring fixed sales resources.

3. Product Vision

Create a trusted, measurable and scalable digital operating layer where organizations publish work and manage resources, while workers discover opportunities, complete verified tasks and receive digital payment.

4. Solution

Layer	Capabilities
Worker App	Onboarding, job discovery, applications, task execution, evidence, performance, wallet, incentives.
Organization Portal	Jobs, slots, KPIs, payment slabs, applicant review, attendance, approvals and reporting.
Admin/Ops	Validation, QA, fraud controls, resource management, disputes and dashboards.
KYC/CPV	Assisted KYC, identity validation, CPV, evidence capture and SOC review.
Payment	Wallet, disbursement, commissions, payment criteria and escrow controls.
B2B Sales	Campaigns, lead generation, virtual sales network, sales performance and CRM integration.

5. Key Product Modules

- Job marketplace and assignment.
- Call-center management.
- Field-resource management.
- Survey and CPV.
- Assisted KYC.
- Product promotion and SR workflows.
- Wallet and payment.
- Dashboard and reporting.
- Masked communication.
- Loyalty/referral/incentives.
- Campaign and B2B sales portal.
- Migration and operational controls.

6. User Journey — Survey

- Find and apply for survey job.
- Assignment based on location/availability.
- Capture data, image/video evidence.
- Admin configures form/routes.
- Validation and performance monitoring.
- Approved work included in reports.
- Payment according to configured rules.

7. User Journey — Assisted KYC

- Verify dealer phone by OTP.
- Capture business and identity information.
- Validate NID/DOB and liveness.
- Capture CPV/shop evidence.
- Review and submit.
- SOC validates.
- Dealer completes PIN setup on own device.

8. User Journey — Organization Job

- Create job and modality.
- Define slots, modules, KPIs and payment slabs.
- Review applicants and select resources.
- Track attendance/performance.
- Validate output.
- Calculate and disburse payment.

9. Commercial Model

- Client-funded job charges.
- Pay-per-performance B2B sales.
- Advance/credit/SR credit-line models.
- Milestone commissions.
- Dynamic pricing.
- Escrow-oriented funding.
- Fine, rating and suspension controls.

10. Delivery Strategy

Phase	Outcome
1	Fieldwork digitalization: survey, CPV, QR work, monitoring/QA, payment.
2	Customer service: masked calls, dashboard, temporary messaging.
3	Sales-representative upgrade: product promotion/sales and stock connection.

Phase	Outcome
Later	ERP integration, automated training/grade progression, generalized KYC, tracking, IVR, cross-verification, advanced loyalty.

11. Risk Management

- Merchant SDK readiness → capacity planning and parallel work.
- Brand/UI readiness → interim standard design choices.
- Enterprise onboarding → resolve wallet/account dependency.
- Fraud/quality → validation, ratings, cross-verification and evidence.
- Payment security → controlled wallet/disbursement.
- Scalability → modular services and cloud capacity.

12. Historical Project Baseline

Metric	Source Value
Lifetime active users	43,991
Total registrations	239,426
Last-12-month active users	2,908
Last-12-month GTV	56,722,804
Existing balance accounts	50,778
Negative balance accounts	242
Accounts > BDT 1,000	74

These figures are reproduced from source project documentation and should be treated as historical baselines, not current performance claims.

13. Target Outcomes

- Digitize workforce and field operations.
- Reduce manual coordination and payment administration.
- Increase KPI and performance visibility.
- Create measurable B2B sales capacity.
- Expand geographic reach without equivalent fixed infrastructure.
- Improve payment auditability and control.
- Create reusable foundation for enterprise integrations.

14. Product Management Learnings

- Start with the operational bottleneck, not the feature list.
- Phase complex capabilities so early releases create measurable value.
- Treat KYC, payment and fraud controls as product requirements.
- Design both marketplace sides: organizations and workers.
- Use KPI and approval states to make work auditable.
- Resolve dependencies early.
- Separate MVP from later automation and optimization.

15. Case Study Conclusion

The product concept established a unified operating model for workforce sourcing, task execution, field verification, payment and B2B sales. The requirements and phased roadmap created a foundation for operational handover, migration and future expansion into generalized KYC, ERP integration, advanced workforce management and performance-driven commerce.

Portfolio Note

Product names from the source have been generalized in this portfolio version. Underlying requirements, workflows, use cases, migration data, commercial concepts and risk notes are retained as faithfully as possible.
